

A Division of Norstar Aluminum Molds

RotoMart News

August 2021

Welcome

With the economy growing back into a more normal year and the associated growth that goes with it, expansion of capacity has become a priority. This newsletter is the third in a series that addresses the need for capacity and inexpensive, easy ways to accomplish it.

What's Your Problem?

"The Need for Increased Capacity "

There are many ways to improve your efficiencies and capacities through automation and through the currently challenging activity of hiring people. These can be both expensive and frustrating. Another way is by improving the efficiency of your current operations. There are, however, very easy and inexpensive steps you can also take to improve rotomolding efficiencies. We have been focusing on these for the past couple of newsletters in hopes they will assist you in that process.

Creative Solutions

Elimination of post molding operations is a very effective way to improve efficiency and increasing capacity. In this newsletter we are focusing on features that can be molded in instead of being cut in afterwards eliminating the time and handling associated with it. Attempts at this have been made with the use of Teflon®, Peek and Silicon. We offer our line of Freeforms as the easiest and most cost effective way to accomplish this.

Standard Freeforms come in a variety of diameters. They are simply pressed into the wall of a mold and create a molded in hole in the plastic part.

Custom shaped Freeforms can also be designed to provide for holes in molds that are different from round. This allows for a wide area of design freedom and still eliminate post mold shaping, cutting, trimming or drilling.

In some cases, Freeforms can be designed to completely separate two parts making it possible to mold the very efficiently two separate parts in the same mold at the same time eliminating the need for trim stock and any post molding separation of the parts.

We hope you can take advantage of these labor and time saving devices. Look for even more easy and inexpensive ways to improve efficiency in future newsletters.

USED MOLDS

RETAIL ICE CONTAINER

What a great product! The base mold is cast aluminum and the body mold is fabricated aluminum. A complete set of foaming fixtures for all the above molds is included. For details, please contact us at info@rotomart.com.
